Question: Why the students who did not submit peer review marks get a higher mark?

You can set up a penalty for students who do not submit the peer review in 'Penalty for non-submission of marks' setting.

Allow students to self-grade along with peers No

Peer assessment weighting 50%

Penalty for non-submission of marks 40%

[*'Penalty for non-submission of marks' setting*]

Hint:

If you set up 'Allow students to self-grade along with peers' to be 'No', which means students only evaluate other group members, then you **MUST** set up a 'Penalty for non-submission of marks'. Otherwise, the students who have not submitted peer review will get a higher mark than other group members.

If you set up 'Allow students to self-grade along with peers' to be 'Yes', which means students evaluate themselves and other group members, then you do not have to set up "Penalty for non-submission of marks".

Allow students to self-grade along with peers No + Penalty for non-submission of marks 40% --> **OK**

Allow students to self-grade along with peers No + Penalty for non-submission of marks 0% --> **Students with no submission get higher marks**

Additional resources:

It is caused by the marking algorithm of Peer Assessment, which take the peer review mark of each student into account. For details, please see <https://ice.xjtu.edu.cn/mod/page/view.php?id=98675>.
