Workshop - grading calculation strategies

227 Yiqun Sun Thu, Mar 4, 2021 Workshop 6826 0

Workshop has four different grading strategies: accumulative grading, comments, number of errors, and rubric. Please refer to this document to understand how grades are calculated in these different strategies.

Workshop accesses the quality of students' submitted work as well as their abilities to access their peers' work through peer assessment. Therefore, the final grade that students receive consists of two parts: grade for submission and grade for assessment. Please refer to this document to understand how grades are calculated in these parts.
