An example of an imported page template in Connect

Overview:

This guide will show you how to export and import a page template on Connect system.

What to know:

A page on Connect contains a selection of artefacts which you arrange and present to others, including resume details, video and audio files, selected files etc. The template for a page is the arrangement of how you display the content to configure the page, which can be used to create e-portfolios or further personal resume. For more information about what Mahara/Connect is, please visit the article [What is Mahara/Connect system](#).

This guide is designed for both teachers and students. For teachers, you can create a page and export as an template for the students to use in their submission for assignment. For students, you can import the page provided by the teacher and utilize it as the template for submitting e-portfolio assignment. You can refer to the guide "[How to submit e-portfolio assignment \(using the Connect and LM platform\)](#)" for further details.

Table of Contents

- [Step 1: Export the existing template page from the Connect system](#)
- [Step 2: Choose the exported format for the template page.](#)
- [Step 3: Import the saved template page](#)
- [Step 4: Choose the way to import your portfolio items](#)
- [Step 5: Locate your imported template page](#)

Step 1: Export the existing template page from the Connect system

After logging in Connect, click on the "hamburger" button in the right corner of the dashboard page. Then click on "Manage" to choose "Export".

Step 2: Choose the exported format for the template page

Click on "Leap2A" as the exported format. Only a Leap2A file can be imported, but not an HTML file.

Export your portfolio i

This tool exports all of your portfolio information and pages. It does not export your site settings or any of the content you uploaded or created in groups.

Choose an export format

☐ Standalone HTML website

This creates a self-contained website with your portfolio data. You cannot import this again, but it is readable in a standard web browser.

☒ Leap2A

This gives you an export in the Leap2A standard format. You can later use this to import your data into other Leap2A-compliant systems, although the export is hard for humans to read.

Click on "Just some of my pages" to display all the templates available. Then click on the template you wish to export.

What do you want to export?

☐ All my data

☒ Just some of my pages

Pages to export

☒ Template 1

Step 3: Import the saved template page

After successfully downloading the template, now you have the ability to import the said file within Connect. click the "Hamburger" button again for "Import".

Select the file by clicking on "Browse" and double click the page file. Then click on "Import".

Import your portfolio i

Here you can import your portfolio content from another site if you have the Leap2A file. You cannot import site settings or content you uploaded to or created in groups.

Fields marked by "" are required.*

Upload Leap2A file *

(Maximum upload size 500MB)

Import

Step 4: Choose the way to import your portfolio items

During this process, you should decide what you want to do with the content in your imported file. Choose "Add new" for both file and page part, so that you have a separate new template, so as not to merge with other artefacts in your existing portfolio.

 **Choose the way to import your portfolio items** 

In this step, you will decide how to merge your imported content with your existing one.
