Step 5: Rename it as "hosts" and select the location "Desktop", then press "Save"

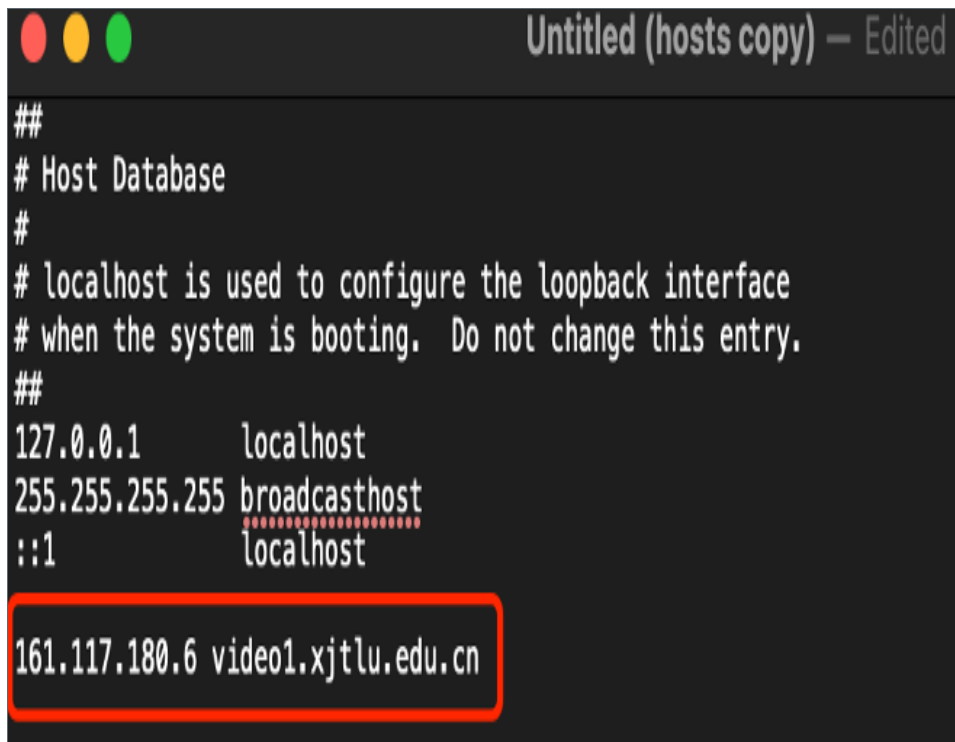

Step 6: Right-click the "hosts" file which just saved on the desktop. Click "Get Info"

Step 7: Delete the ".txt" in the Name & Extension box.

Step 8: Drag this "hosts" file from desktop to the original folder (/private/etc). Click "Authenticate" to allow

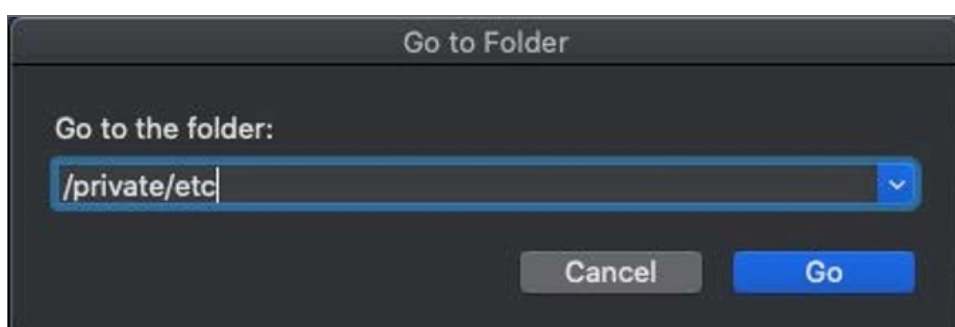

Step 9: Confirm your operation.

Step 1: In Finder, Click "Go to Folder" under the "Go" tab

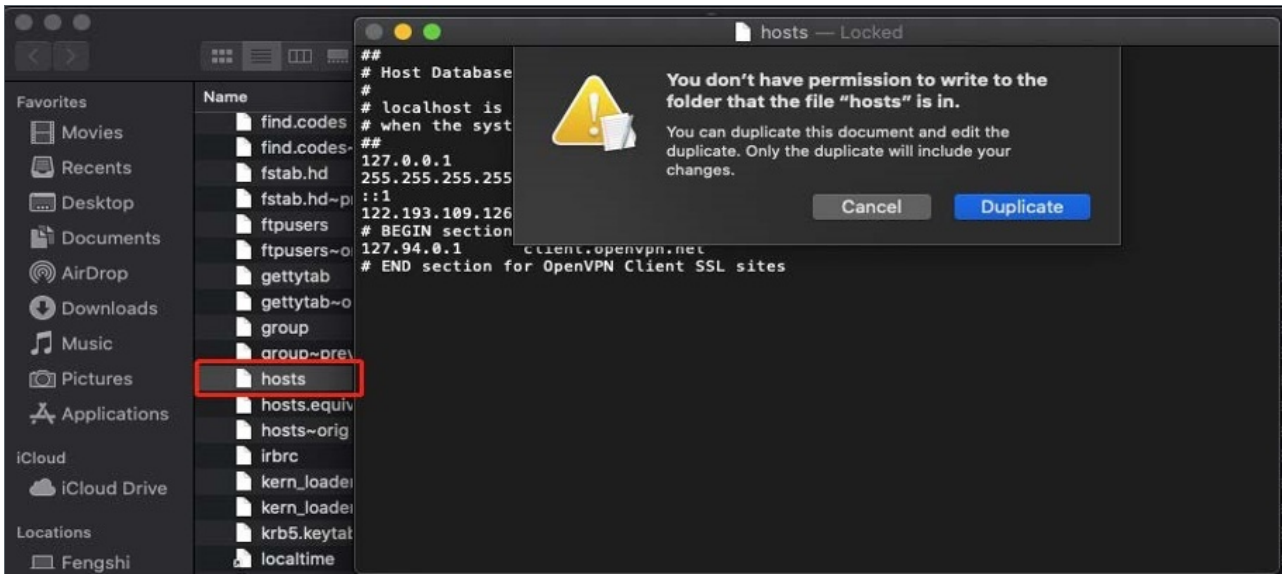

```
##
# Host Database
#
# localhost is used to configure the loopback interface
# when the system is booting. Do not change this entry.
##
127.0.0.1    localhost
255.255.255.255 broadcasthost
::1        localhost
161.117.180.6 video1.xjtlu.edu.cn
```

Step 2: Type /private/etc in the box, then click "Go"

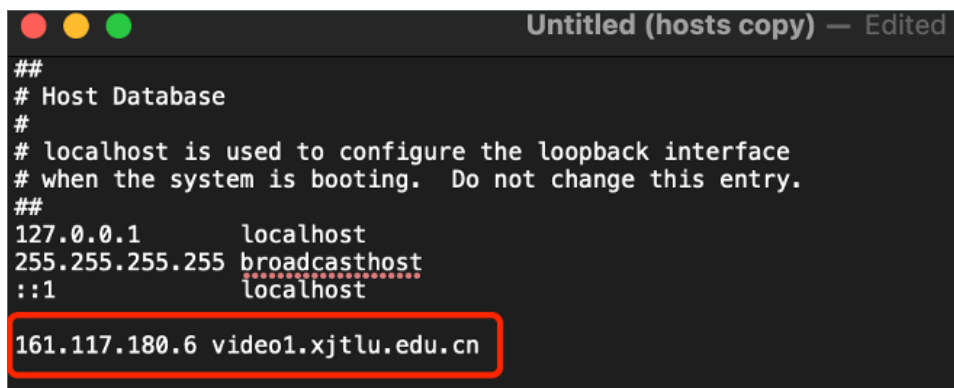

Step 3: Open the "hosts" file. Click the "Duplicate" to create a writable copy.

This "hosts" file is locked and if you press the "Enter" key, there will be a pop-up window to ask you to duplicate it.

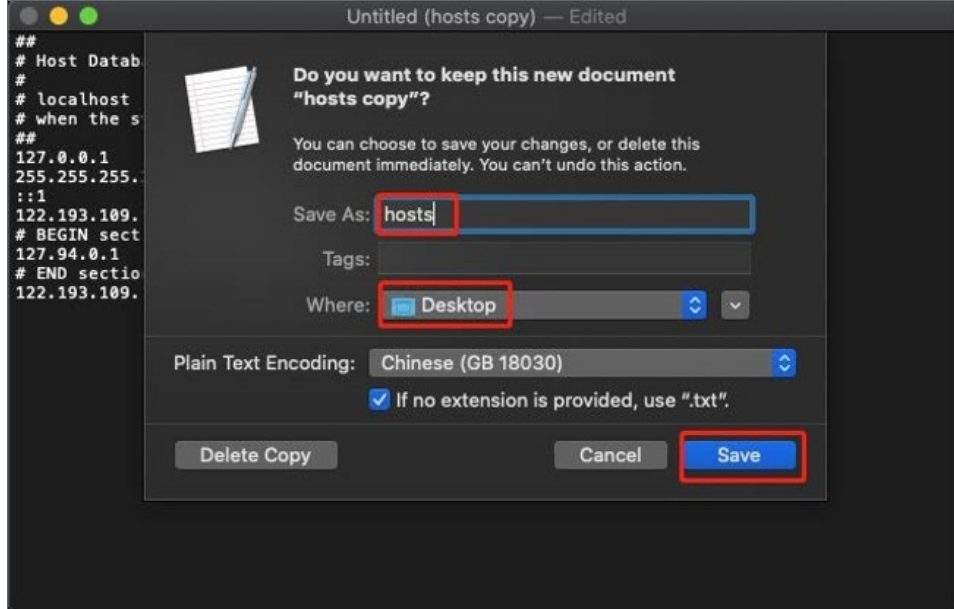

Step 4: Select the address and copy the highlighted content below, paste it at the end of this file, then click close.

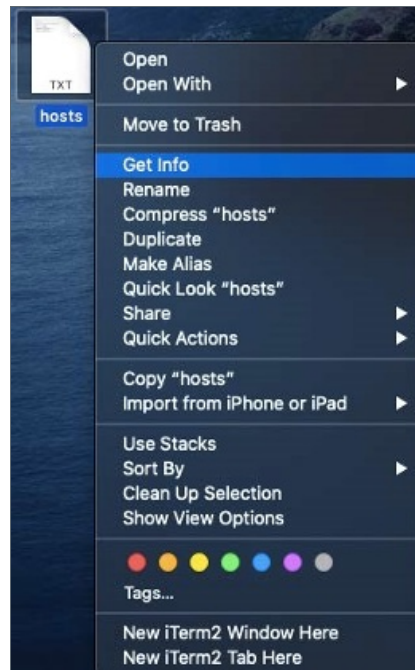

Europe **8.208.3.231 video1.xjtlu.edu.cn**
Southeast Asia **161.117.180.6 video1.xjtlu.edu.cn**

Step 5: Rename it as "hosts" and select the location "Desktop", then press "Save"

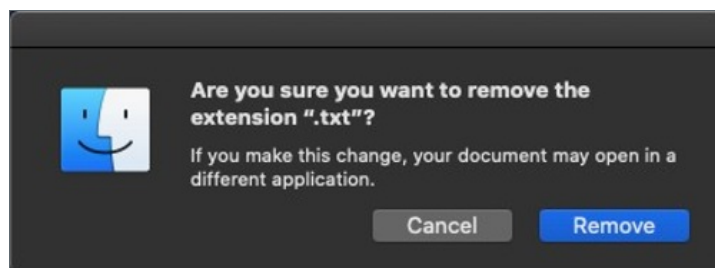

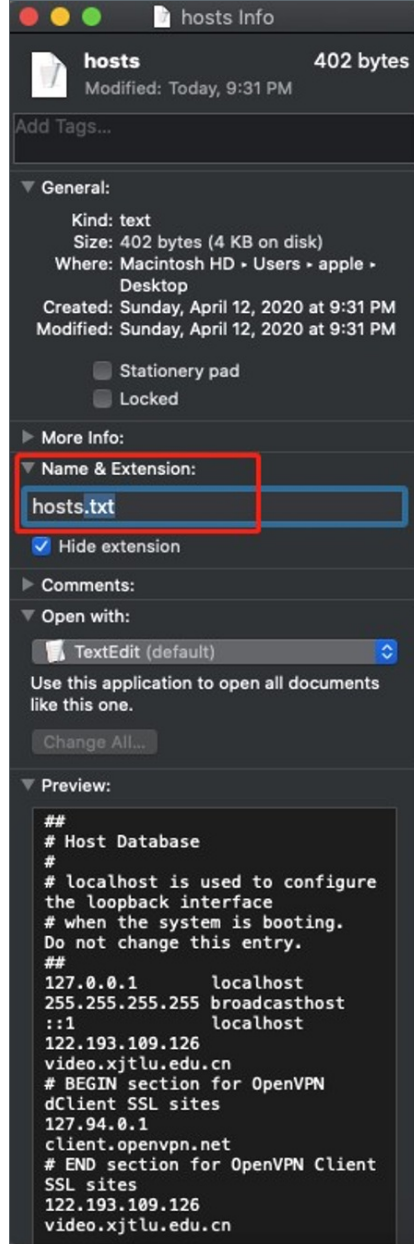

Step 6: Right-click the "hosts" file which just saved on the desktop. Click "Get Info"

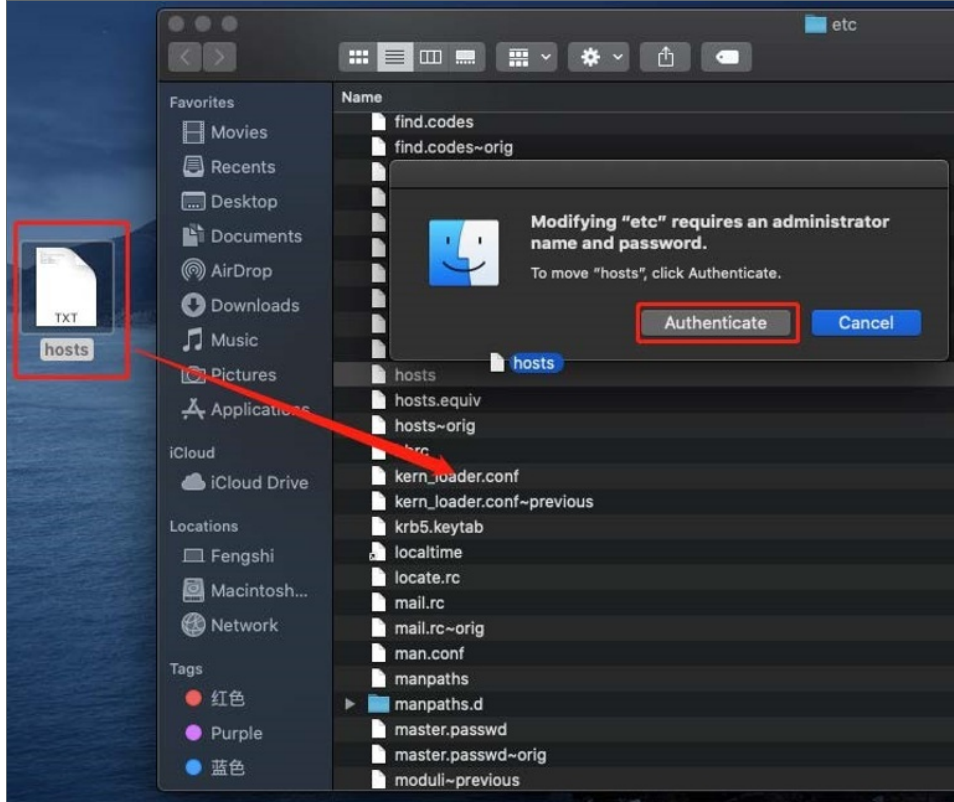

Step 7: Delete the ".txt" in the Name & Extension box.

After deleting the ".txt" extension, there will be a pop-up window to confirm your action. And click the Remove " button.

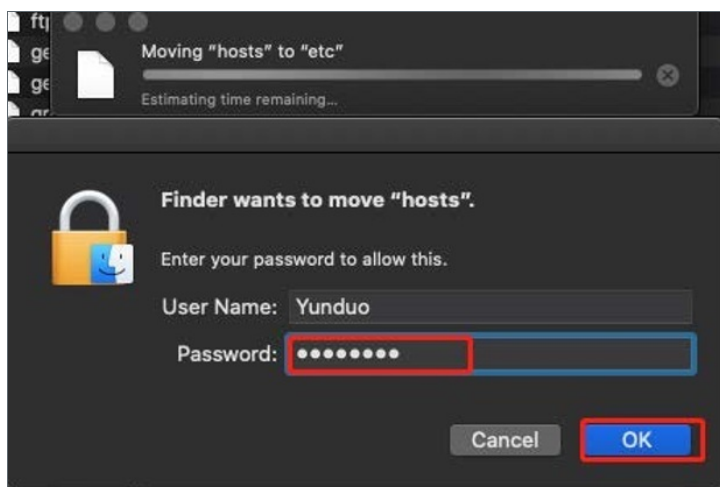

Step 8: Drag this "hosts" file from desktop to the original folder (/private/etc). Click "Authenticate" to allow

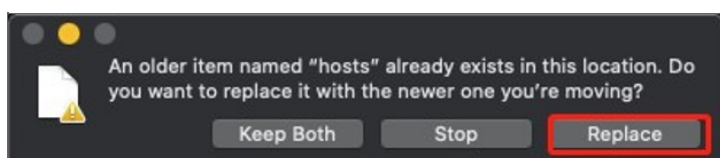

Step 9: Confirm your operation.

1) Enter your admin password and click OK

2) Click "Replace" to finish
