

3. Basic Features of Knowledge Base on XIPU AI Platform

408 Bowen Zhang Fri, Jun 13, 2025 XIPU AI Platform

3526 0

Overview:

This guide details various basic features associated with the Knowledge Base function in XIPU AI platform.

What to know:

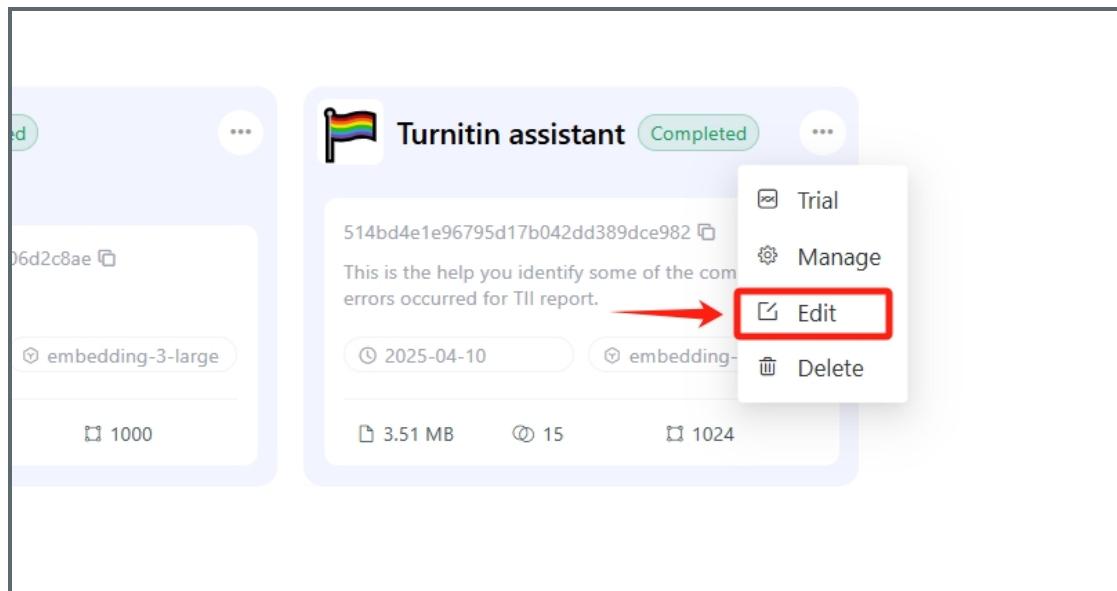

A Knowledge Base for an AI system serves as a repository where users can upload various types of files, including PDFs, Word documents or spreadsheets. This allows the AI to access and utilize the information contained within these documents to provide more accurate and informed answers. To begin constructing a Knowledge Base, you can click [Construct Knowledge Base and Link back to the Module Page](#) for the detailed instructions. Additionally, understanding the basic features of a Knowledge Base is crucial for its effective application.

Table of Contents

- [Step 1: Edit the Knowledge Base](#)
- [Step 2: Manage your Knowledge Base](#)
- [Step 3: Test your Knowledge Base](#)
- [Step 4: Knowledge Base Application](#)

Step 1: Edit the Knowledge Base

Even after creating a Knowledge Base, you can still change its settings by clicking the action button top right and select "Edit".

You can change the name and description in the corresponding columns;
You can update its icon;
You can also add system prompt to limit its responses.

Step 2: Manage your Knowledge Base

Click the action button and select "Manage" to add more files to your knowledge base.

Click "Upload knowledge base" and then simply drag and drop more files into the designated area.

Wait until the added file has been completed for the training.

Once uploaded, you still have the option to delete it by clicking on the dustbin icon at the top right.

← Knowledge base management / Turnitin assistant

The screenshot shows a user interface for managing a knowledge base. On the left, there is a red-bordered box containing an 'Upload knowledge base' button with the text '(Up to 100 files can be uploaded)'. To the right, a list of files is displayed, including a completed PDF named 'Turnitin Errors Report.pdf' from 'Bowen.Zhang' on '2025-04-10' at '3.51 M'. The interface includes navigation buttons (back, forward, page 1, 20/20) and a 'Total 1 Count' message.

Step 3: Test your Knowledge Base

Click the action button and select "Trial" to evaluate the functionality of your knowledge base.

The screenshot shows a 'Turnitin assistant' interface. A file named '514bd4e1e96795d17b042dd389dce982' is previewed. A context menu is open, with the 'Trial' option highlighted by a red box and arrow. Other options in the menu are 'Manage', 'Edit', and 'Delete'.

Enter your questions in the dialogue box below to interact with the knowledge base. If the responses do not meet your expectations, consider converting the detailed information in the uploaded file into a format language machine can understand.

 I encounter an error message with XML and API errors, what does it mean?

 The error message related to XML and API errors indicates issues with communication between Moodle and Turnitin during file submission. Specifically:
Error Description: The error message may state: "This file has not been submitted to Turnitin because there is a problem editing the module settings in Turnitin which is preventing submissions, please consult your API for further information" or "Turnitin has returned an error with your submission: XML Response could not be parsed."
Possible Issues:
 A communication error occurred while transferring files from Moodle to Turnitin.
 The Turnitin server might be experiencing issues or undergoing maintenance, which can affect performance.
 The filename might exceed 40 words or contain invalid characters like Chinese brackets or quotation marks.
Solution:
 Check the real-time status of the Turnitin server at <https://turnitin.statuspage.io/> to confirm if server issues are causing the error.
 Resubmit the file at the back-end.
 Rename the file to ensure it has fewer than 40 words and does not contain invalid characters, then resubmit.
 If there are only a few cases, manually resubmit the file by clicking the red "x" button next to the error icon. For bulk cases, contact Learning Mall for assistance with back-end resubmission.

Step 4: Knowledge Base Application

After creation, you can integrate it with the Agent you've set up:

Click the "Agent" tab in the left navigation bar;

Click the arrow next to "Knowledge Base Configuration" to expand its settings.

Select all the available knowledge base you have configured and the limit number of knowledge base is 10.

The screenshot shows the 'Configure Agent' page. The left sidebar has tabs for AI Chat, Knowledge, Agent (which is selected and highlighted with a red box), Gallery, Music, Video, and App. The main area has sections for 'Description' (with a 'Please Input' placeholder) and 'Prompt' (with a 'Please Input' placeholder). Below these is a 'Conversation Configuration' section with a 'Knowledge Base Configuration' dropdown (also highlighted with a red box). A red arrow points to the 'Turnitin assistant' entry in this dropdown. The 'Turnitin assistant' entry has a description: 'Turnitin assistant This is the help you identify some of the common errors occurred for TII report.' and a note: 'Only from Knowledge base answer'. At the bottom, there are fields for 'Reply when knowledge base cannot answer' (with placeholder '抱歉, 这个问题超出了我的知识范围') and '抱歉, 这个问题超出了我的知识范围'.

Besides the integration to "Agent", the knowledge base can also be linked to the AI tutor constructed in Learning Mall Core platform.

Block settings

Block title: XIPU AI Chat

Select a Mode: Knowledge Base

Assistant name: AI Tutor

Show both the assistant's and users' names

Source of truth:

Q: What is the module code?
A: MTH301

Q: Who is the instructor for this course?
A: Dr. Jane Smith

Completion prompt:

You are an AI tutor helping students with math problems. Respond in a formal tone and avoid jokes.

KB Mode

KnowledgeBase ID: 4fd0969b93badb22e971d401d188a87a,958b48f74afa2b37a83e7790507d3d2f

If you would like to connect to multiple KB, please use comma (,) to split.

Display the source file: No
